

The Months on the Tip of Lake Superior

January, Ice fishing brings fun, don't fall in hypothermia will surely catch you.

February, Even though it's cold out the 8 to 10 hour cleaning process of water does not stop.

March, the ice starts to melt so does the snow, all into the sewers and into the lake.

April, Showers come and go, while washing away the dirt in their path into the rivers.

May, more showers bring flowers, and then goes rushing into the storm sewers.

June, Schools out! Make sure your goldfish has a place to swim, but not in the streams or lakes.

July, Here comes the little Piping Plover, here to have some fun on the beach.

August, Swimming and boating bring great fun for everyone, but always have a life jacket for everyone.

September, the paper mill is really going now, making wood chips into clean white paper, for school is starting.

October, Halloween brings litter, even in the lake, "pick it up" yelled a lady, "or no candy for you!"

November, the estuary starts to freeze; kids come out to play, while their mothers scream, "Don't fall in!"

December, When snowmobiles come out to play, the risk of oil going into the lake is greater.
